

Read in narrative order across pages 1–3, block 1 through 9. Page 4 lays the same nine blocks out as the classic canvas grid.

1 CUSTOMER SEGMENTS

WHO PAYS, WHO USES

Aitbaar sits between two groups who are not the same people: the bank that pays, and the SME owner who uses it.

- **Pays (customer):** Pakistani commercial & microfinance banks — SME Banking, Digital Banking, Credit Risk. Buyers: Head of SME Banking, Chief Digital Officer, Chief Risk Officer.
- **First target:** UBL — 11m customers, Temenos live across five segments including SME, an existing WhatsApp banking channel.
- **Uses (two groups):** UBL's SME credit & relationship officers; SME owners seeking PKR 500,000–7.5m across retail/wholesale trade, food, textiles, light manufacturing.

The SME is the user. The bank is the customer. We are never between them on price.

2 VALUE PROPOSITIONS

ONE PRODUCT, THREE AUDIENCES

The same product earns trust three different ways — one for each party on the file.

- **To the bank:** same-day, explainable decisions instead of weeks; more files per officer per day at lower cost; a regulator-ready audit trail; a growth path toward the SBP's 2028 SME-borrower target.
- **To the officer:** one page to read instead of fifty; consistent, defensible decisions with reasons attached, not a black box.
- **To the SME owner:** applies from his own counter, on WhatsApp, in Urdu; zero branch trips to apply, full document checklist up front; a reason and a path forward, not just a no.

Same score, same factors, three different summaries — nothing invented per audience.

3 CHANNELS

NOTHING NEW TO BUILD

We never build a new channel — we plug into ones that already exist on both sides of the file.

- **To the bank:** this hackathon and NIC Karachi incubation — the pilot itself is the channel; then integration into Temenos loan origination and UBL's existing WhatsApp Business number.
- **To the SME:** WhatsApp, already open on his phone; a QR code at the branch SME desk; the DSR's phone at the shop counter.
- No new app for the SME owner to install — the channel he already uses becomes the front door.

Distribution at scale is UBL's, not ours — they already have 11 million customers.

Continued from page 1 — blocks 4 through 6.

4 CUSTOMER RELATIONSHIPS

MATCHED, NOT UNIFORM

Each side of the file gets a different kind of relationship, matched to how much attention it actually needs.

- **Bank** (B2B enterprise): pilot → integration → dedicated support → model retraining on the bank's own portfolio.
- **SME owner**: automated self-serve via WhatsApp — no account manager, no onboarding call, no human touch to apply.
- **Officer**: human-in-the-loop by design — the brief recommends, the officer always makes the final decision.

Relationship depth matches where trust has to be earned — heaviest with the bank, lightest with the SME.

5 REVENUE STREAMS

PRICED THE WAY A BANK ALREADY THINKS

We sell decision throughput, not credit risk. We do not lend and we carry none of the default exposure.

- **Per-assessed-application fee**: PKR 300–800 per file, against a marginal cost of roughly PKR 30 — gross margin above 90%.
- **Annual platform licence**: dashboard access, system integration, retraining on the bank's own portfolio.
- **One-time integration fee** for core-banking (Temenos) and the WhatsApp channel.
- **Later**: portfolio monitoring — the same pipeline run monthly on existing borrowers — and a consortium model trained across participating banks.

Tailwind: the SBP's target of 750,000 SME borrowers and PKR 1.5 trillion in SME financing by June 2028 — hundreds of thousands of net-new files to assess in under three years.

6 KEY RESOURCES

WHAT CAN'T BE IMPROVISED ON A DEADLINE

What can't be improvised on a deadline is what we've already built and already tested against real Pakistani documents.

- The AI credit engine itself: extract → verify → score → explain → brief, running end-to-end today.
- A Pakistani-document extraction edge-case library — angled CNIC photos, mixed Urdu/English utility bills, a dozen bank statement formats.
- The synthetic-to-real training data and retraining pipeline (*models/train.py, features.json*).
- A working WhatsApp bot and officer dashboard — not a mockup.
- The team: 1st of 162+ teams, Code for Pakistan AI for Civic Innovation Hackathon.

Continued from page 2 — blocks 7 through 9, the back stage of the canvas.

7 KEY ACTIVITIES

ONE TEAM, A FIXED ORDER

Four workstreams, one team, in a fixed pipeline order — verification always runs before scoring, never after.

- Model development and retraining (XGBoost + SHAP).
- Document-extraction tuning for Pakistani formats.
- WhatsApp bot and officer dashboard development.
- Bank / core-banking integration (Temenos).
- Pilot operation across shadow, parallel, and limited-live phases.
- Explainability and compliance work — consent capture, audit trail.

07

8 KEY PARTNERSHIPS

ACCESS, OR KEEPS THE ENGINE RUNNING

Every partner on this list either gets us in front of a bank, or keeps the engine running once we're there.

- **UBL** — first bank, pilot partner.
- **NIC Karachi** — incubation.
- **Temenos** — the core-banking / loan origination vendor UBL already runs.
- **Gemini via OpenRouter** — vision-LLM document extraction.
- Supabase, Railway, Vercel — infrastructure.

Later: PM Youth Business Loan partner banks, the SBP SME Finance Task Force agenda, microfinance banks.

08

9 COST STRUCTURE

A SOFTWARE COST BASE, NOT A LENDING ONE

A software cost structure, not a lending one — we carry none of the credit risk.

- **Team:** 4 FTE, unpaid through the hackathon, budgeted for a 6-month pilot.
- **Hosting:** roughly USD 50–150/month at pilot volume (Railway + Vercel + Supabase).
- **Variable:** about PKR 30 all-in per application assessed, dominated by vision-LLM extraction.
- **CAC:** near zero at this stage — the buyer is running the hackathon.

Two orders of magnitude below the cost of a manual credit-officer hour.

09

1 Segments → 2 Value Prop → 3 Channels → 4 Relationships → 5 Revenue → 6 Resources → 7 Activities → 8 Partners → 9 Cost

8 KEY PARTNERSHIPS

- UBL · NIC Karachi · Temenos
- Gemini via OpenRouter
- Supabase, Railway, Vercel
- Later: PMYBL banks, SBP SME agenda, microfinance banks

7 KEY ACTIVITIES

- Model dev + retraining
- Extraction tuning
- Bot + dashboard build
- Temenos integration
- Pilot operation

6 KEY RESOURCES

- AI credit engine
- Pakistani doc edge-case library
- Retraining pipeline
- The team

2 VALUE PROPOSITIONS

- **Bank:** same-day decisions, lower cost/file, audit trail
- **Officer:** one page, not fifty
- **SME:** WhatsApp in Urdu, zero branch trips

4 CUSTOMER RELATIONSHIPS

- Bank: pilot → integration → support
- SME: automated self-serve
- Officer: human-in-the-loop

3 CHANNELS

- Hackathon + NIC Karachi
- Temenos + WhatsApp Business #
- SME-desk QR, DSR phone

1 CUSTOMER SEGMENTS

- **Pays:** banks — Head of SME Banking, CDO, CRO
- **Uses:** loan officers + SME owners (PKR 500k–7.5m)

9 COST STRUCTURE

- 4 FTE team
- ~USD 50–150/mo hosting
- ~PKR 30/application
- Near-zero CAC

5 REVENUE STREAMS

- PKR 300–800/application, >90% margin
- Annual licence + integration fee
- Later: monitoring + consortium
