

User Personas & Journey Maps

Day 1 Deliverable — UI/UX · AI-assisted SME loan origination

Aitbaar sits on **one loan file** with three people around it: the **SME owner** who applies, the **loan officer** who decides, and the **Head of SME Banking** who has to trust the system at portfolio scale. The two primary users sit on opposite sides of the same file — every design decision is judged by whether it removes friction for both at once.

PERSONA 1 · APPLICANT · PRIMARY USER

Muhammad Imran

41 · Shah Alam Market, Lahore

📦 Wholesale/retail cloth · 6 yrs · 3 employees

📱 Android · WhatsApp open all day

🌐 Urdu-first, limited written English

💰 ~PKR 850,000/mo sales — cash + JazzCash

Snapshot — Real, profitable business; never taken a formal loan. Keeps a hand-written ledger (bahi). No laptop, printer, or scanner. Wants working capital before Eid / wedding season. The bank feels like a closed door.

🎯 GOALS

- Fast working capital before the season passes
- No repeated branch trips
- Judged on his business, not on contacts
- Know exactly what's needed and where he stands

⚠️ FRUSTRATIONS

- 3–5 branch trips, each for one more undeclared document
- Weeks-long decisions, unexplained rejection
- Feels it runs on *sifarish*, not merit
- English forms are a barrier

👤 BEHAVIOURS

- Already sends document photos over WhatsApp; won't install a new app for one loan
- Falls back to committee / family / *aarti* when refused by a bank

💬 "Har baar naya kaghaz maang lete hain. Mujhe pehle hi bata dein kya chahiye, aur wajah bata dein agar mana karna hai."

✅ HOW AITBAAR HELPS

- ✓ Applies from his own counter, on WhatsApp, in Urdu
- ✓ Full document checklist declared up front, one-time consent
- ✓ Status pushed at every step — zero branch visits to apply
- ✓ If something's missing, told the one exact item — nothing vague

PERSONA 2 · LOAN OFFICER · PRIMARY USER

Sana Tariq

33 · SME Credit / Relationship Officer, UBL Branch · 8 years experience

Branch desktop, bank email, internal systems

40–60 page files, several open at once

Snapshot — Wants to hit SME targets but is the bottleneck. Reads every file by hand, cross-checks herself, writes decisions under time pressure. Cost to assess a small file is close to a large file, so small tickets get pushed aside.

GOALS

- Process more files a day without cutting corners
- Consistent, defensible decisions
- Spend time on judgement, not data entry
- Catch fraud before it becomes a bad loan

FRUSTRATIONS

- Manual extraction and verification by eye
- Two officers score the same file differently
- No structured record — decisions are hard to audit
- Chasing missing docs one at a time; small tickets not worth the hours

"I do not need the machine to decide for me. I need it to read the file, flag the risks, and let me approve in minutes instead of hours."

HOW AITBAAR HELPS

- ✓ One-page credit brief instead of 50 pages — score /100, risk tier, top factors, fraud flags, recommended range
- ✓ One click through to any source document
- ✓ Approve, decline, or request exactly one missing item
- ✓ Every decision + reasoning lands in an audit trail

PERSONA 3 · ECONOMIC BUYER

Adnan Qureshi

Head of SME Banking, UBL

Portfolio growth

Turnaround time

Risk

Cost per file

Regulatory defensibility

Snapshot — Under pressure to grow the SME book toward the SBP target of 750,000 borrowers by 2028. Can't hire his way to the throughput; needs technology that raises officer capacity without raising risk — and that a regulator accepts.

GOALS

- More new SME borrowers at a controlled default rate
- Turnaround cut from weeks to days
- Higher files-per-officer-per-day without headcount
- Only explainable, auditable, consent-based decisioning

HOW AITBAAR HELPS

- ✓ Weeks-long manual file → same-day, explainable decision at ~PKR 30/assessment
- ✓ Runs on a channel (WhatsApp) and core system (Temenos) the bank already uses
- ✓ AI recommends, officer decides — every decision auditable
- ✓ A direct answer to the SBP's call for tech + data + fintech partnerships

Journey Map 1 — SME Owner Applies

Muhammad Imran, from trigger to decision · Channel: WhatsApp, Urdu-first

STAGE	1 Trigger	2 Apply	3 Submit Documents ★ MOMENT OF TRUTH	4 Processing	5 Decision
ACTION	Hears Aitbaar exists via WhatsApp; season stock running low	Messages the number, picks Urdu, reads full checklist, consents once	Photographs CNIC, 6-month bank statement, utility bill; answers 5 short questions	Keeps running the shop; types "status" for updates	Gets outcome in Urdu on WhatsApp
THINKING	"Is this really different from a branch loan?"	"This is the whole list — no surprises later?"	"Will counter-shop photos actually be accepted?"	"At least I know where I stand"	"A real reason — not just a no"
EMOTION — TODAY	<i>Skeptical, wary of past rejections</i>	<i>Guarded</i>	<i>Anxious — every past attempt broke down here</i>	<i>The usual black-hole wait</i>	<i>Resigned to silence or an unexplained no</i>
EMOTION — WITH AITBAAR	<i>Cautiously curious</i>	<i>Relieved — nothing hidden</i>	<i>Focused, in control — done from his own counter</i>	<i>Calm — status pushed automatically</i>	<i>Confident, respected either way</i>
TOUCHPOINT	Word of mouth / bank SMS	WhatsApp (Urdu)	WhatsApp — photo upload	WhatsApp — status ping	WhatsApp (Urdu)

3–5 branch trips → zero trips to apply

Weeks of silence → status at every step

Unexplained no → a reason and a path forward

Journey Map 2 — Loan Officer Processes a File

Sana Tariq, from queue to notification · Channel: Aitbaar Dashboard
